#### **Basel II Introduction**

Effective November 1, 2007, Canadian banks are subject to revised capital adequacy requirements based on the "International Convergence of Capital Measurement and Capital Standards: A Revised Framework", commonly known as Basel II. The new Framework is designed to reflect more risk-sensitive capital requirements and to strengthen soundness and stability of banks by promoting adoption of stronger risk management practices.

The Basel II Framework introduces the concept of 3 Pillars:

- Pillar 1 the actual methodologies that must be applied to calculate the minimum capital requirements.
- Pillar 2 the requirement that banks have internal processes to assess their capital
  adequacy in relation to their strategies, risk appetite and actual risk profile. Regulators
  are expected to review these internal capital adequacy assessments.
- Pillar 3 reflects the market disclosures required by banks to assist users of the information to better understand the risk profile.

This Appendix reflects a portion of the Pillar 3 market disclosures based on information gathered as part of the Pillar 1 process, and should assist users in understanding the changes to the risk weighted assets and capital requirements arising from the new Framework. The Bank will provide the remaining required disclosures by the fourth quarter of 2008.

#### Basel II vs. Basel I

Basel II classifies risk into three broad categories: credit risk, market risk and operational risk (new), while Basel I had only two categories: credit risk and market risk. The regulatory capital required under Basel I, for credit risk, was based on pre-specified risk weights applied to categories of claims. This did not provide for a granular differentiation of credit risk capital (e.g. all corporate loans were risk-weighted 100% irrespective of the quality of the loans).

Under Pillar 1 of the new Basel II Framework, minimum capital is calculated using one of the following approaches:

- Credit risk capital Internal Ratings Based Approach (Advanced or Foundation) or Standardized approach.
- Operational risk capital Advanced measurement approach (AMA), Standardized approach or Basic Indicator approach.
- Market risk capital more granular treatment for specific risk under Standardized approach compared to Basel I.

#### Credit Risk

The credit risk component consists of on- and off- balance sheet claims. The new rules are not applied to the traditional balance sheet categories but introduce new categories of on- and off-balance sheet exposures which represent general classes of assets/exposures (corporate, sovereign, bank, retail, equity) based on their different underlying risk characteristics.

Generally, while calculating capital requirements, exposure classes such as Corporate, Sovereign, Bank, Retail, Equity are analyzed by the following credit risk exposure sub-types <sup>1</sup>: Drawn, Undrawn, Repo-style transactions, Over-the-counter (OTC) Derivatives and Other off-balance sheet claims.

The Bank has received approval from OSFI to use the Advanced Internal Ratings Based Approach (AIRB), subject to certain conditions, for credit risk of its material portfolios booked in Canada, US and Europe. The Bank uses internal estimates, based on historical experience, for probability of default (PD1), loss given default (LGD1) and exposure at default (EAD1).

- Under the AIRB, credit risk risk-weighted assets (RWA) are calculated by multiplying the capital requirement (K) by EAD times 12.5, where K is a function of the PD, LGD, Maturity and prescribed correlation factors. This results in the capital calculations being more sensitive to underlying risks.
- To address concerns that the new Basel II rules might cause significant decreases in capital required, banks are currently required to add an overall scaling factor of 6% to the credit risk RWA for AIRB portfolios.

For the remaining material portfolios, the interim treatment is the Standardized approach, until such time they become AIRB compliant (the remaining material portfolios are targeted to be compliant by the beginning of fiscal 2011).

 The Standardized Approach applies regulator prescribed risk weight factors to credit exposures based on the external credit assessments (public ratings), where available, and also considers other additional factors (e.g. provision levels for defaulted exposures, loan-to-value for retail, eliquible collateral, etc).

#### Operational Risk

The Bank is using the Standardized Approach for operational risk, where the capital charge is based on a fixed percentage of the average of the previous 3 years' gross income. The fixed percentages range from 12% - 18% and are based on the type of business, with retail banking activities at the low end of the range and investment banking and capital markets activities at the high end.

#### **Transitional Considerations**

The regulator's transitional arrangements prescribe that for institutions receiving full approval to use the AIRB, a capital floor will be applied for at least two years post approval. The floor is based on a regulatory formula that essentially compares the minimum capital required under Basel I to the minimum capital required under Basel II, and does not allow the latter to fall below the floor based on the former. If a floor is invoked, a prescribed adjustment to risk weighted assets is required to increase the capital to the targeted floor threshold.

#### **Glossary** Scotiabank **Credit Risk Parameters** EAD Exposure at Default Generally represents the expected gross exposure of the facility upon default of the obligor for both on-balance sheet and offbalance sheet exposures. PD Probability of Default Expressed as a percentage, measures the likelihood that a borrower will default within a 1-year time horizon. LGD Loss Given Default Expressed as a percentage of exposure at default, measures the severity of loss on a facility in the event of a borrower's Effective Maturity Represents the maximum remaining time (in years) that the borrower is permitted to take to fully discharge its contractual obligation. Effective maturity is generally subject to a 1 year floor and 5 year cap (except for repo-style transactions). **Exposure Types** Non-retail Corporate Defined as a debt obligation of a corporation, partnership, or proprietorship. Defined as a debt obligation of a bank or bank equivalent (including certain public sector entities (PSEs) treated as Bank Bank equivalent exposures). Defined as a debt obligation of a sovereign, central bank, certain Multi Development Banks (MDBs) and certain PSEs treated Sovereign as Sovereign Equity Ownership interest in a corporation in the form of common stock or preferred stock. Includes liquidity lines to Bank's own sponsored and third party ABCP Conduits, credit enhancements and on-balance sheet Securitization investments in asset backed securities, mortgage backed securities, and collateralized debt obligations. Retail Residential Mortgages Loans to individuals against residential property (four units or less). Home Equity Lines Of Credit Revolving personal lines of credit secured by home equity. (HELOCs) Qualifying Retail Revolving Includes credit cards and unsecured line of credit for individuals. Exposures (QRRE) Other Retail Includes all other personal loans. **Exposure Sub-types** Outstanding amounts including all loans and debt securities, deposits with banks (DWBs), leases and bankers acceptances. Drawn Undrawn Unutilized portion of an authorized credit line. Repo-Style Securities reverse repurchase agreements (reverse repo) and repurchase agreements (repos), securities lending and OTC derivatives Comprises all over-the-counter derivatives contracts (i.e. excludes exchange-traded derivative contracts as they have no counterparty credit risk). Other Off Balance Sheet Comprises all off-balance sheet arrangements other than derivatives and undrawn commitments (e.g. direct credit substitutes,

standby letters of credits, guarantees, trade letters of credits, transaction related contingencies etc.).
